MISSION

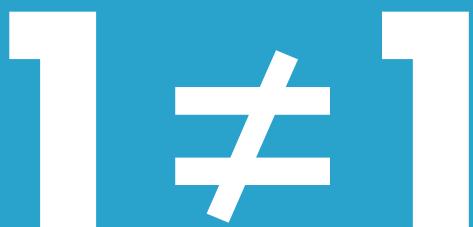

The Lafert Group, a leading European Motor Company, is committed to continuous growth by being the global leading manufacturer of **customised engineered Electric Motors and Drives** with specific focus on Industry Automation, Energy Saving, and Renewables.

The Lafert Group will strive to be the ideal partner in the Electric Motors and Drives industry through focus on meeting specific customer demands. Mutually beneficial partnerships are developed by continuous process improvements utilising state-of-the-art products and techniques by a skilled, motivated and professional workforce.

ONE IS DIFFERENT FROM THE OTHER. SIMPLY UNIQUE.

Lafert design and build customised electric motors with unique characteristics, because the needs of our customers are unique. The control of the whole manufacturing process allows for any aspect of the motor to be modified. This gives the ability to engineer customized motors that fit the final application/work environment for maximum efficiency and reliability.

Lafert leverages over 50 years of experience in partnering with Global Companies from its 12 locations spread across Europe, North America, Asia and Australia.

One is different from the other.
Simply unique.

HP RANGE, Permanent Magnet Synchronous Motors and Drives, Super Premium Efficiency – IE4/IE5, IPM and SMPM technology, designed for HVAC applications

HP RANGE**THE IE4 AVAILABLE SOLUTION**

High Performance (HP) is a generation of PM (Permanent Magnet) Synchronous Motors, achieving **IE4 and IE5 Super Premium Efficiency** level, that offer improved electrical efficiency at stable and reduced production costs without applying rare earth magnets.

This uniquely engineered product combines the electrical design of Brushless Servomotors with the mechanical design of AC Induction Motors. The result is a compact motor primarily targeted toward HVAC applications in fans, compressors, and blowers, where there is emphasis on reducing the operating cost or weight and size of the motors.

The complete range 0.37 kW to 37 kW are supplied as **stand-alone motors (HPS)** to be controlled by a separate drive, specifically designed for their energy saving potential.

Electric Motors for HVAC Applications by Frost & Sullivan

2014 AHR Expo Innovation Awards:
Green Building Category

ADI Index Design 2012:
Best Italian design in manufacturing

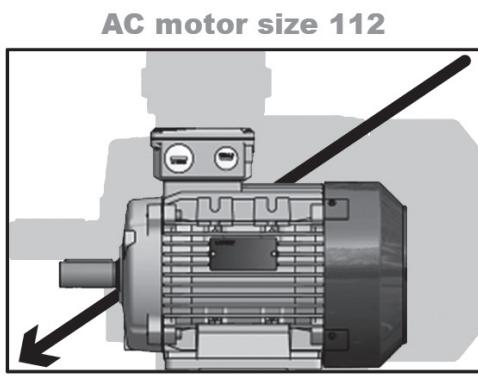

LEVERAGING LEADING-EDGE TECHNOLOGIES

High Performance Motors (HPS) are an innovative range of **PM (Permanent Magnet) Synchronous Motors**, achieving **IE4 Super Premium Efficiency** level that offer improved efficiency and reduced operating costs.

Lafert's in house servo and AC induction motor design and manufacturing capabilities have facilitated the development of this uniquely engineered range of Permanent Magnet IE4 Synchronous Motors.

In order to develop the HP Motor, Lafert used a combination of product designs inspired by the brushless servo motor's electrical design and the AC induction motor's mechanical design.

With higher efficiencies than standard AC induction motors they also enhance the power/weight ratio, thereby allowing for significant **size and weight reductions of up to 50%**.

The Lafert PM rotor technology of the HP motor has no losses. Also, stator currents are lower, consequently generating lower losses due to lower current demand (Joule effect). The resulting benefit is a lower rated temperature rise for both the windings and bearings. These limited temperature rises can, in the right design, eliminate the need for a cooling fan and its related losses. Ultimately, the sum of these minimised heat contributions provide higher running speeds and extended bearing life.

Lafert place great emphasis on materials research. This has resulted in reduced dependency on rare earth magnets, allowing the use of more readily available permanent magnets, which ensures price and supply stability into the future. Following this development work Lafert have introduced a **second generation of PM Synchronous Motors**, named HPF, achieving **IE4 Super Premium Efficiency** level, with more stable and reduced production costs **without applying rare earth magnets**.

VALUE ADDED FEATURES & BENEFITS

The primary benefit offered by Lafert's HP synchronous motor is the reduction in the life cycle cost of the motor. The combination of servo brushless and induction motor technology used for the development of this product gives it a high efficiency low noise design. Because of the higher efficiency, the product dissipates lower heat, which improves its operating life.

This motor is primarily targeted toward **HVAC applications** in pumps, fans, compressors, and blowers, where there is an emphasis on reducing the operating cost or weight, and size of the motors. Lafert also offers flexibility in terms of design, customising the active and mechanical parts of the motor to suit specific customer requirements.

Lafert also has the ability to produce this motor in high volume on a regular scheduled delivery basis with modifications as per specific customer requirements. The HP PM synchronous motor is available in a range of power outputs, ranging **from 0.37 kW to 37kW**, with full flexibility in motor speed up to 6000 RPM; it can be controlled by most standard drives.

INCREASED CUSTOMER ROI

The high operating efficiency offered by Lafert's PM synchronous motor leads to lower electricity consumption costs. The uniquely efficient design also improves the life of this motor, thereby reducing potential down time and refitting costs.

The product meets the IE4 efficiency class at all operating speeds, making it one of the most efficient electric motors available in the European market. This is ahead of the mandatory efficiency requirements set by the European Union, currently for IE2 and IE3 motors.

LAFERT PM MOTORS' AWARDS

Based on **Frost & Sullivan's** Best Practices independent research, Lafert have been granted the **2013 European New Product Innovation Leadership Award** in Electric Motors for Heating Ventilation Air Conditioning (HVAC) Applications.

The High Performance Motor from Lafert has been awarded as the winner in the **Green Building Category of the 2014 AHR Expo Innovation Awards Competition**.

RANGE OF PRODUCTS

A range of solutions to meet specific demand:

- **Stand-alone drive** (HPS range)
- Sensorless control or with speed transducer
- **IPM** (Interior Permanent Magnets) or **SMPM** (Surface Mounted Permanent Magnets) **design**, depending on the performance demand

BRIEF DESCRIPTION

The following features of our HP Motors may vary depending on series and type:

- Admissible environmental temperature: from -15 °C up to +40 °C, with altitudes 1000 m above sea level
- Mounting: IM B3, B5, B14, B34, B35
- Flange concentricity degree "N"; balancing: vibration "A/B"; dynamic balancing with half key
- Shaft designed according to the standard version with key (also available without key)
- Available speeds: 1500, 1800, 3000, 3600, 4500 rpm (others on request)
- Drive operating voltage: 230 or 400 Vac
- Insulation class: "F"; temperature rise to class B (TEFC execution)
- IP55 degree of protection for the whole range
- On-Off PTO switch for thermal protection (NTC and PTC are available)
- Optional feedback on request: resolver, encoder, tacho and Hall sensors (several combinations may be added to this list)
- Reduced dimensions
- Permanent magnets technology

DEFINITIONS

- **HPS:** High Performance Stand alone motors to be controlled by a separate drive (SENSORLESS)
- **Rated torque (Mn):** Torque available on the shaft continuously (service S1) with rated speed and with a winding current equivalent to the rated current, holding the motor in rated working condition.
- **Peak torque (Mpk):** Torque available on the shaft discontinuously, with a winding current equivalent to the peak current.
- **Rated current (In):** Current supplied to the motor continuously at a rated speed, required to develop rated torque.
- **Peak current (Ipk):** Current supplied to the motor discontinuously within a wide range of speed, required to develop peak torque without exceed the thermal class of motor.
- **Voltage constant (Ke):** Ratio between voltage induced by the rotor rotation (RMS value for sinusoidal motor, peak value for trapezoidal motor) at a certain number of revolutions and angular speed ($\omega=2 \times \pi \times n/60$ where n is the speed expressed in rpm) measured in rad/sec.
- **Torque constant (Kt):** Ratio between torque on the shaft and the current RMS value for sinusoidal motors, peak value for trapezoidal motors (equivalent to the voltage constant of a trapezoidal motor and to that of a sinusoidal motor multiplied by $\sqrt{3}$).
- **Back electromotive force (B.E.M.F):** Voltage induced by the rotor rotation (RMS value for sinusoidal motor, peak value for trapezoidal motor) at a certain number of revolutions.

QUALITY SYSTEM CERTIFICATE

The strictness of our quality control assures the flawless operation and reliability of our products. Our quality is confirmed by the **Certificate ISO 9001:2015** awarded by KIWA-CERMET, a certification body authorized by ACCREDIA.

SAFETY STANDARDS

Our motors comply with the requirements of the International Standard **IEC 60034** for rotating electrical machines as well as with the following European Directives: **Low Voltage Directive (LV) 2014/35/EC**, **Electromagnetic Compatibility Directive (EMC) 2014/30/EC**.

All products comply with the requirements of the **Directive Machines (MD) 2006/42/EC**. In accordance with this Directive, induction motors are components and intended solely for integration into other machines. Commissioning is forbidden until conformity of the end-product with this Directive is proved.

The CE marking was applied for the first time in 1995.

When operating the motor, the observance of the Regulation EN 60204-1 and safety instructions indicated in our Operating Instructions must be complied with.

Motors complied with many other international standards are available on request:

Motors approved by UL Underwriters Laboratories Inc.

EFFICIENCY STANDARDS

The HPS motors comply with:

IEC TS 60034-30-2: Rotating electrical machines - Part 30-2: Efficiency classes of variable speed AC motors (IE-code)

STANDARDS AND REGULATIONS

EFFICIENCY VALUES ACCORDING TO IEC 60034-30-2:2016

Efficiencies are harmonized to the **International Standard IEC 60034-30-2:2016** that extends the efficiency levels to Super Premium Efficiency IE4 and IE5.

IE4 REFERENCE LIMIT					IE5 REFERENCE LIMIT

For the nominal efficiency calculation refer to the IEC 60034-30-2:2016.

The HPS motors comply with the relevant standards and regulations, especially:

ELECTRICAL	Rating and performance	IEC 60034-1
	Efficiency classes of variable speed AC Motors (IE-CODE)	IEC 60034-30-2
	Terminal markings and direction of rotation of rotating electrical machines	IEC 60034-8
	Selection of Energy-efficient motors including variable speed applications-application guide	IEC/ST 60034-31
	Insulating materials	IEC 60085
MECHANICAL	Dimensions and output ratings	IEC 60072
	Mounting dimensions and relationship frame sizes-output ratings, IM B3, IM B5, IM B14	IEC 60072
	Cylindrical shaft ends for electric motors	IEC 60072
	Degrees of protection	IEC 60034-5
	Methods of cooling	IEC 60034-6
	Mounting arrangements	IEC 60034-7
	Mechanical vibration	IEC 60034-14
	Mounting flanges	DIN 42948
	Tolerances of mounting and shaft extensions	DIN 42955
	Classification of environmental conditions	IEC 60721-2-1
Mechanical vibration; balancing		ISO 8821

VIBRATION AND SHOCK

HPS Motors have been tested according to a procedure based on the following standards:

IEC 60068-2-6: Vibration (sinusoidal) - 1970

IEC 60068-2-34: Random vibration broad-band- general requirements

IEC 60068-2-35: Random vibration broad-band- high reproducibility

IEC 60068-2-36: Random vibration broad-band- medium reproducibility

HPS Motors comply with requirements that correspond to conditions in the standards mentioned above.

AIR HUMIDITY

HPS Motors have been designed to meet the IEC 60068-2-3 standard, EN 50178 item 9.4.2.2/DIN 40040, class E, at 40°C.

Cyclic damp heat according to IEC 60068-2-30, 40°C.

DEGREES OF PROTECTION

Degrees of mechanical protection for machines are designated in accordance with **IEC 60034-5** by the letters **IP** and two characteristic numerals.

First numeral: Protection against contact and ingress of foreign bodies

Second numeral:
Protection against ingress of water

IP	Description	IP	Description
5	Protection against dust (harmful deposits of dust)	5	Protection against water projected by a nozzle from any direction
6	Complete protection against dust	6	Protection against heavy seas or water projected in powerful jets

ELECTRICAL TOLERANCES

For industrial motors to **EN 60034-1**, certain tolerances must be allowed on guaranteed values, taking into consideration the necessary tolerances for the manufacture of such motors and the materials used. The standard includes the following remarks:

- 1- It is not intended that guarantees necessarily have to be given for all or any of the items involved. Quotations including guaranteed values subject to tolerances should say so, and the tolerances should be in accordance with the table.
- 2- Attention is drawn to the different interpretation of the term guarantee. In some countries a distinction is made between guaranteed values and typical or declared values.
- 3- Where a tolerance is stated in only one direction, the value is not limited in the other direction.

Values for	Tolerance
Efficiency (η) (by indirect determination)	- 0.15 ($1 - \eta$) at $P_N \leq 150$ kW - 0.1 ($1 - \eta$) at $P_N > 150$ kW
Power factor ($\cos \varphi$)	$\frac{1 - \cos \varphi}{6}$, minimum 0.02, maximum 0.07
Rated current with rated torque and revolutions (measurement in S1 duty cycle at rated speed with $\theta_{amb} \leq 40$ °C and altitude ≤ 1000 m above sea level)	In +/- 5%
Back electromotive force: Bemf	Bemf +/- 5%
Peak torque (M_K)	- 10 % of the guaranteed value (after allowing for this tolerance, M_K/M_N not less than 1.6)
Moment of inertia (J)	± 10 % of the guaranteed value

MECHANICAL TOLERANCES

Motors have to be installed according to their mounting arrangements defined by **IEC 60034-7**, Code I (in brackets Code II). The mechanical components may be designed in order to work as for the motor mounting code.

According to **IEC 60072-1**, the following tolerances on mechanical dimensions of electric motors are permitted:

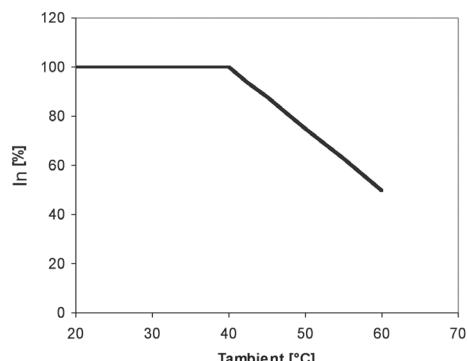

Parameter	Code	Tolerance	
Shaft height	H	- up to 132	-0.5 mm
		- from 11 to 28 mm	j6
Diameter of shaft end¹⁾	D	- from 38 to 48 mm	k6
Hub key width	F		h9
Flange spigot	N	- up to 132	j6
		- over size 132	h6

1) Centring holes in shaft extension to DIN 332 part 2

THERMAL PROTECTION AND DERATING

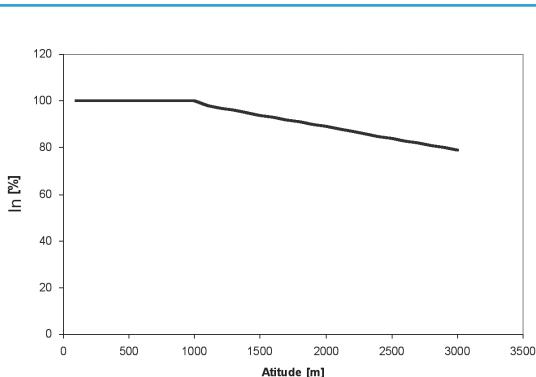

The HPS Motors are thermally protected in case limits are exceeded (140°C), another protection is provided through the drive.

DERATING FOR AMBIENT TEMPERATURE

The ambient temperature (TAMAX) is the maximum temperature allowed. If HPS Motor is operated at temperatures above 40°C , a derating of the continuous output current is necessary.

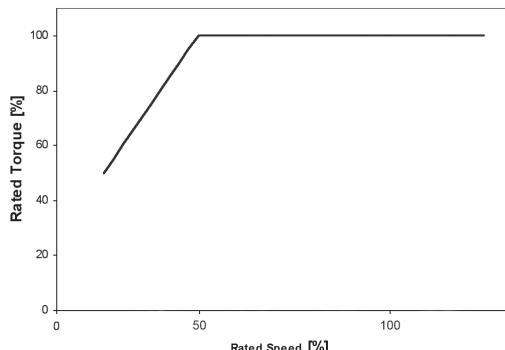

DERATING FOR AIR PRESSURE

Below 1000 m altitude no derating is necessary. Above 1000 m the ambient temperature (TA) or max. rated output current (IN) must be derated in accordance with the following diagram.

See the below diagram for derating of output current versus altitude at TA = max. 40°C

DERATING FOR RUNNING AT LOW SPEED

When a centrifugal pump or a fan is controlled by a HPS Motor, it is not necessary to reduce the output at low speed because the load characteristic of the centrifugal pumps/fans, automatically ensures the necessary reduction.

HPS motors running constant load torque applications continuously at low speed must be derated (see diagram as example) or an independent fan must be used.

HPS ELECTRICAL CONNECTION

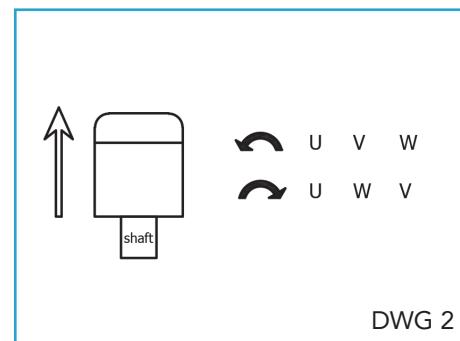

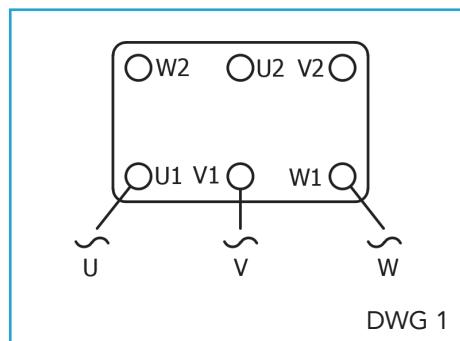

The stand-alone HPS motor can NOT be installed directly on the mains. HPS motor needs always to be controlled by a drive.

The 3 phases from the drive needs to be connected to U1, V1, W1 (Please see DWG 1).

HPS motors covered in this catalogue are all related to 400V data, and are designed for one supply voltage. It is not possible to make star/delta connections in the terminal box like on an AC motor. HPS motor is in general 3*400V but can also be delivered for 3*230V.

Rotation direction: there are two ways to change the rotating direction of the HPS motor. First of all by changing the sequences of 2 phases from the drive or by having the drive to change the rotating direction via the software (Please see DWG 2).

Warning: please be aware that when turning the shaft and without any connection to the drive, the HPS motor will work as a generator and deliver a voltage level (BEMF Voltage) according to the rotating speed.

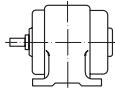

MOUNTING ARRANGEMENTS

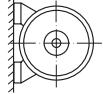

Mounting arrangements for rotating electrical machines are designated according to IEC 60034-7, Code I (in brackets Code II).

Foot mounting

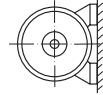

IM B3 (IM 1001)

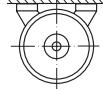

IM B6 (IM 1051)

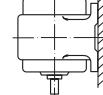

IM B7 (IM 1061)

132 XXL	-	2.60	2.63	2.65	2.70

COOLING

TEFC execution as standard.
Surface cooling, independent of the direction of rotation.

VIBRATION

The amplitude of vibration in electric motors is governed by EN 60034-14 **Mechanical vibration of rotating electrical machines with shaft heights 56 and larger - methods of measurement and limits**.

Standard motors are designed to vibration grade A (normal). Vibration grade B is available at extra cost.

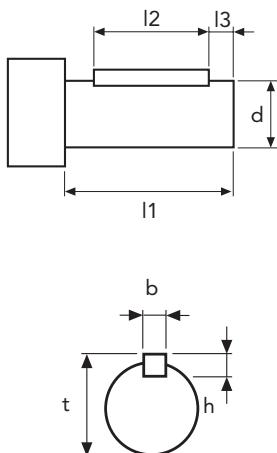

Rotors are at present dynamically balanced with **half key** fitted as per DIN ISO 8821. Other balancing only on request.

The motors are identified as follows:

"H" or "blank" means balanced with **half key**

"F" means balanced with **full key**

"N" means **no key**

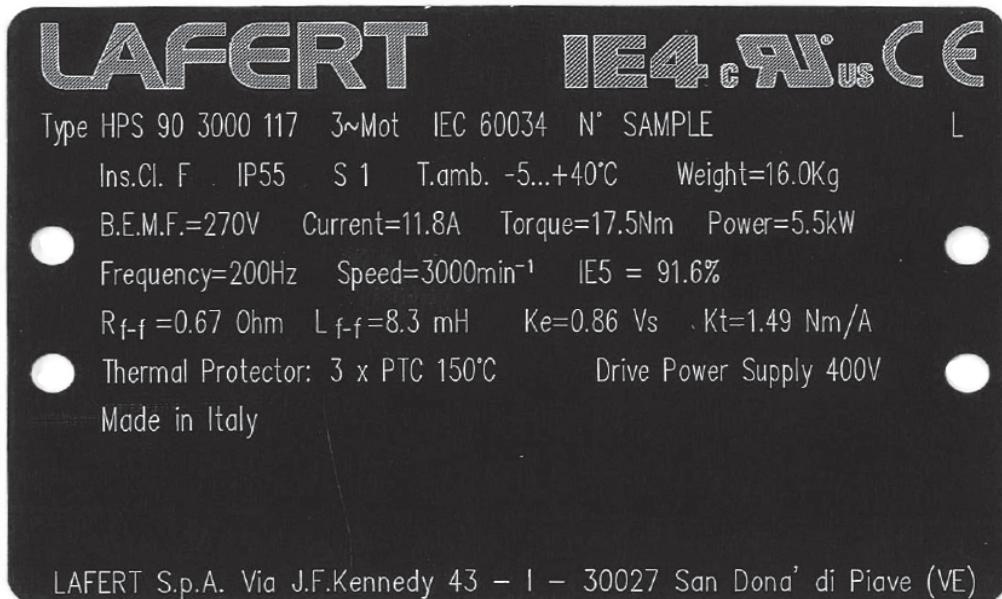

POSITION AND DIMENSIONS OF KEY

Frame size	d x l1	b x h	l2	l3	t
56	14 x 30	5 x 5	20	6	16
71	19 x 40	6 x 6	30	6	21.5
