

HP Combi

Smart  Flow  Plus+ 
solutions to meet your needs

HP Combi is a **highly efficient motor-drive package** that combines a **PM (permanent magnet) synchronous motor with the matched VFD (Variable Frequency Drive)**, achieving very **High Efficiency** levels.

The motor range leverages both brushless servo motor and AC induction motor technologies, so enhancing the power density and allowing for significant **size and weight reductions up to 50%**.

Several drive configurations are available to cover a wide range of industrial and commercial applications. In fact, HP Combi is targeted to both **variable torque applications**, typically in HVAC, as well as to **constant torque applications** like material handling, air compressors and vacuum pumps.

HP Combi is **Plug & Play**: preconfigured motor-drive solutions designed for easy set up and increased system efficiency.

SAVING ENERGY WITH COMBI

Electric motors have a significant impact on the worldwide energy consumption:

→ **up to 75% in industrial application and 40% in commercial application***

Today, a major factor influencing the motor industry is energy efficiency driven by both increasingly demanding legislation and the industry's

greater awareness of environmental responsibility.

Lafert embraces the challenge! With HP Combi, saving energy and reducing costs are possible with three easy steps:

- 1. INCREASED MOTOR EFFICIENCY**
- 2. SPEED CONTROL BY A VFD**
- 3. SYSTEM OPTIMISATION**

2. SPEED CONTROL BY VFD

1. INCREASED MOTOR EFFICIENCY

ADDED VALUES & BENEFITS

MOTOR-DRIVE SYSTEM FULLY DIMENSIONED AND CONFIGURED
according to customer needs

PLUG & PLAY SOLUTION
for a fast and easy set-up

INCREASED SYSTEM EFFICIENCY & SHORT PAYBACK TIME
thanks to speed control and motor-drive optimisation

THREE MOTOR-DRIVE CONFIGURATIONS
to cover both variable and constant torque applications

ADVANCED CONTROL ELECTRONICS
PC and mobile tools for easy commissioning, control and service

ONE SINGLE SOURCE
for both motor and drive

1. INCREASED MOTOR EFFICIENCY

PM (permanent magnet) Synchronous Motors offer improved electrical efficiency when compared to traditional AC motors, achieving **IE4 and IE5 efficiency levels**.

PM technology benefits:

- **HIGH EFFICIENCY ACROSS A WIDE RANGE OF OPERATING SPEEDS**
- **EXCELLENT POWER DENSITY AND TORQUE CAPABILITY**

2. SPEED CONTROL BY VFD

A Variable Frequency Drive (VFD) is used to adjust the speed and torque of motor according to the variable demand of an application.

This results in a **relevant decrease in energy consumption** that leads to a **remarkable improvement in overall process efficiency**.

70% of applications are suitable for speed control. Typical variable torque applications, like **fans, compressors and pumps**, will benefit considerably from speed control:

SPEED REDUCTION OF 20% RESULTS IN UP TO 50% ENERGY REDUCTION

3. SYSTEM OPTIMISATION

The motor-drive system is **fully dimensioned and configured in accordance with the application's needs** and the customer's requirements.

Each motor-drive system is unique and designed for the purpose.

This results in a **PLUG & PLAY solution**, with a wide range of optimised motor-drive configurations for **fast set-up and easy commissioning**.

One single source for both system's components, motor and drive, makes this possible!
